#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Goedde et al. [US 5,736,915]

Goedde et al. discloses a self-cooled gas insulation transformer [10] comprising:

- an iron core and coil assembly [figure 5];
- a transformer tank [12] enclosing the core and coil assembly; and
- a cooling inert gas filled the tank.

Goedde et al. inherently discloses the inert gas having a global warming coefficient rated 1 or below and a molecular weight less than 146.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5, 7/5, 8/5 and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goedde et al. in view of Ikema [JP 09-7843].

Application/Control Number: 10/066,458

Art Unit: 2832

Goedde et al. discloses the instant claimed invention except for the specific material use for the core.

Ikema discloses a transformer core [2] formed of amorphous magnetic alloy material disposed in a transformer tank [4] filled with cooling medium.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use amorphous or the core of Goedde et al., as suggested by Ikema, for the purpose of improving performance.

Regarding claims 7/5, 8/5 and 10, the specific pressure used would have been an obvious design consideration based upon the intended application and operating environment.

Claims 7/1-4, 7/6, 8/1-4 and 8/6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goedde et al.

Goedde et al. discloses the instant claimed invention except for the specific pressure for the inert gas.

The specific pressure used would have been an obvious design consideration based upon the intended application and operating environment.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TUYEN T NGUYEN whose telephone number is 703-308-0821. The examiner can normally be reached on M-F 8:30-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, ELVIN ENAD can be reached on 703-308-7619. The fax phone numbers for the
